

Robust Data Migration Service for Mergers and Acquisitions in the Oil and Gas Industry

Digital Oil & Gas Solutions combines solid cloud computing and engineering to support oil and gas merger and acquisition procedures. We provide a multi-phased data cleansing approach for any acquisition of companies and/or new assets.

Digital Oil & Gas Solutions' software platform performs health checks on source data, identifies blank fields, and sends results back assisting with closing gaps in the required data.

Additionally, our service compares incoming data sets with existing information in target systems, whether it's a FlowCal, Wellview, or ERP of client's choice. Digital Oil & Gas Solutions is experienced in migrating AS400 mainframe and client/server systems, access databases, spreadsheets, and various oil and gas data platforms.

Let us help you properly plan and migrate your data during mergers and acquisitions.

How does seamless and safe data migration facilitate mergers and acquisitions?

Agile and mature migration procedures allow for faster data validation process.

Identifies and eliminates duplicates creating a consistent, valid database for smooth, long-term business operations.

The service maps obtained data to target ERP system and retains tables for alter use as needed.

Our platform integrates with structured data sources from SQL- or Oracle-based tables, semi-structured data from spreadsheets or access, and unstructured data from PDFs and Word documents.

Helps clients detect legacy data in a few days and perform data conversion in several weeks, instead of months.
